

## BEFORE YOU START

Read instructions carefully before assembling and shaping the tree.

### What's in the Box:

- BASE X1
- TREE BOTTOM SECTION X1
- TREE MIDDLE SECTION X1
- TREE TOP X1

### Assembly instructions

1. Assemble the Tree Stand
  - The tree base folds out into an X-shape comprised of four legs. Turn the eye bolt into the stand just enough to ensure the legs cannot fold back together.
2. Secure the Tree
  - Insert the bottom section of the tree into the base (Image 1) then tighten the eye bolt completely (Clockwise). The centre pole should extend straight up and should not wobble.
- 2.1 Gently lower the branches into place. The branches should be shaped one row at a time (Figure 1).
  - Insert the middle section of the tree (Image 2). Repeat instructions from number 2.1.
  - Insert the top section of the tree (Image 3). Repeat instructions from number 2.1.
3. Shape the Branches
  - Branch shaping is best performed during assembly but can be done, if preferred, when tree assembly is completed (Figure 1). It is recommended to step back from time to time to see what parts of the tree may need more shaping. Shift branches to fill any gaps.
